

SALT BORING MACHINE - MICHAEL BYRNE EXTREME HEAVY DUTY

Michael Byrne Manufacturing Co, Inc.

BORING MACHINE

Michael Byrne Mfg worked with the Department of Energy (DOE) to assist with problem of disposing of drums from nuclear waste facilities dating back to World War II era.

Byrne designed a compact, extremely durable, electric boring machine to bore holes in salt domes 2,000 feet below the desert. The machines were put into service in the year 2001 and have been in continuous service since with a production rate that surpassed expectations.
