

## Michael Byrne MFG. - Tunnel Shields

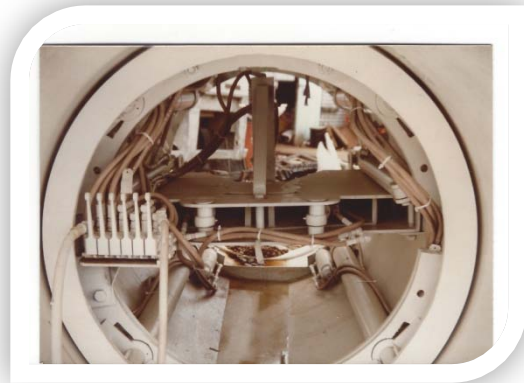

Michael Byrne Mfg tunnel shields have been a staple for the underground contractor since the 1960's. The Byrne tunnel shield system is designed to provide excavation support to tunnel beneath roadways, railroads, streams, existing utilities and buildings. The tunnel shield is driven by hydraulic cylinders specifically designed to provide the thrust required for the project. Our shields are hydraulically driven using multiple cylinder designs to provide adequate thrust and push. Baffles are designed to support the face in various soil conditions.

Byrne Tunnel Shields are designed to incorporate the latest in OSHA safety, production advancements, attachments, and convenience items. If your project requires Tunnel liner Plate Structures, Metal Beam, or Rib Tunnels make Michael Byrne Mfg your tunnel shield source.

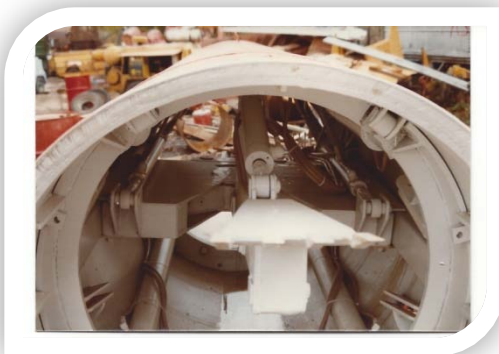

Don't forget to include various options for your tunnel shield; rail systems and muck carts, conveyors, articulated digging equipment, power units, tunnel communications, and more. Make Michael Byrne Mfg shields that are "Made in the USA" your choice for the tunnel project ranging from 48" to 195" diameters.
